Description

The ALPIlignum veneer is a multilaminated and sustainable real wood veneer according to the standard It is a composite veneer from the Italian company ALPI, which thus set new standards in the world of veneers. Thanks to the special manufacturing process, a consistent texture, colour and quality can be guaranteed for years under the defined article number. The base woods used, poplar, ayous and lime, come from responsibly managed forests or Italian tree farms (plantations) and are mostly FSC-

certified. The grown wood is freed from natural growths, knots and colour defects in various processing steps and assembled into a new solid wood block from which the ALPI veneers are sliced.

By adjusting the colour or the texture-giving press mould and through a multiple production run, the veneer can be changed so decisively that an almost limitless variety of designs is created.

ALPILIGNUM - The advantages

Real wood

A real wood veneer is more highly valued by the consumer than a wood imitation made of paper or foil.

Consistent texture, colour and quality

Once an item has been defined, it is always produced in the same way. Even after years, you will always receive the same veneer under the defined item number. Veneers with different textures but the same colour are perfectly matched.

Waste reduction

The standard widths of about 64-65 cm, for example, cover the entire carcass width of a wardrobe; here you only incur costs for clipping multiple lengths or widths. For panels and composite elements in half format, only 2-3 sheets or joints per side are required.

Infinite availability

Even for rare wood species such as macassar, rosewood, zebrano or root masers, we guarantee your supply entirely according to demand.

WYSIWYG – What you see is what you get

You will receive exactly the surface that you have sampled or seen and selected in the showroom. We guarantee consistency in supplementary or extension purchases.

Cost savings in surface finishing

The cost-intensive changeover of the coating line when changing the surface is no longer necessary, as you can continue to use the same coating system.

Specifications

Category	Veneers
Product group	ALPI veneers
Thicknesses	0.55 mm
Weight kg/m2	0.250
Specie	Obeche
Botanical name	Fineline
Wood type	Hardwood
Main occurrence	Africa
Wood origin	Africa
Manufacturing/origin	Italy
Certification	not certified
Colour	dark brown
Hue	dark
Use	furniture interior doors wall ceiling
Customs tariff number	44083900
Packaging	1 sehet, loose
Items on stock	yes
Date of delivery	approx. 2 - 3 working days

Postal shipping

Ja
