

Bouls Silver Fir 30 mm

Item No. 02-000580

Description

The wood image of the white fir spreads a friendly and light-flooded flair with its yellowish-white colour and an occasional slightly bluish shimmer. As with the spruce, the image is accentuated by the annual rings, which stand out clearly with their dark late wood.

Trade names and other names

German: Silbertanne, Kreuztanne

English: Christmas tree, Common silver fir, European silver fir, Silver fir, White fir

Arabic: Tannub mishti

Chinese: 云杉

Available thicknesses

30, 40, 48, 50, 60, 70, 80 mm, other thicknesses on request.

Occurrence

Fir is widespread in the low mountain range of Europe, mainly restricted to Central and South-Eastern Europe, often associated with spruce.

Trunk and bark

Fir grows to a height of about 40m, the trunk is branchless up to half its length and reaches a diameter of up to 1.0m. The bark of the fir is smooth, whitish-grey in colour, with small, bump-like swellings. From the age of 40 to 60 years, the fir develops a scaly bark which is white to dark grey in colour. This scaly bark is coarsely cracked and shows clear transverse cracks.

Characteristics and wood colour

Fir is coarse-grained and straight-grained, the pattern is medium-fine and even. Fir is resin-free. The sapwood and the heartwood are not sharply separated, they are whitish with yellowish or reddish shimmer. The late wood is sharply defined.

Specifications

Category	Lumber
Product group	Unedged lumber
Thicknesses	30 mm
Weight kg/m3	480.000
Specie	Silver Fir
Botanical name	Abies alba
Wood type	Softwood
Main occurrence	Europe
Wood origin	Austria Switzerland
Certification	not certified FSC®100% 100% PEFC
Colour	yellow
Hue	clear
Use	furniture musical instrument construction wood
Surface structure	rough-cut
Humidity	10% ± 2%
Customstarriff number	44071210
Packaging	loosely
Items on stock	yes
Date of delivery	approx. 3 - 6 working days
Postal shipping	nein
