

## Sägefurniere Kastanie 7 mm

Item No. 01-000677

---

## Description

The chestnut has a yellowish brown to dark brown colour. The decorative character of the wood comes from the impressive veins and stripes that appear on the longitudinal cuts. In addition, the large pores of the chestnut form distinct needle cracks. The texture of the wood is strong due to the clearly visible annual rings.

### Trade names and other names

German: Kastanie, Sweet Chestnut

English: Sweet Chestnut, Chestnut, Marron

French: Châtaigner

Italian: Castagno europeo, Castagno

Spanish: Castaño

Dutch: Tamme kastanje

Portuguese: Castanheiro, castanheira, castanheiro-bravo, castanheira-portuguesa

Arabic: n.a.

Chinese: 栗

### Available sawn veneer thicknesses

7 mm, other thicknesses on request

### Occurrence

The chestnut tree originates from Asia and was already cultivated in Europe in ancient times, so that the main occurrence today is still in the countries of the Mediterranean area, i.e. especially in Portugal, Spain, Italy, the Balkans, North Africa and Asia Minor up to the Caspian Sea. North of the Alps, the chestnut is found especially in Switzerland, southern Germany, southern and western France and southern England.

## Trunk and bark

The chestnut grows up to 25m high and with diameters of up to 1.2m. As a result of the strong cane growth, the trunk is rarely more than 10 to 12m knot-free in chestnut. The bark is glossy reddish brown with white lenticels on one-year-old branches, olive brown on perennial branches, spotted by lichen, and shows bark formation after the 15th year. It is grey-brown, longitudinally cracked and contains about 12% tannic acid.

## Characteristics and wood colour

Pores are ring-shaped and large. Annual rings are very distinct. The large pores form distinct needle cracks in longitudinal section. Decorative wood with high tannic acid content. The sapwood and heartwood of the sweet chestnut are well separated. The sapwood is very narrow and dirty yellow-white, while the heartwood is light brown and shiny when fresh, darkening later.

# Specifications

Category	Veneers
Product group	Sawn veneers
Thicknesses	7.00 mm
Weight kg/m <sup>2</sup>	3.750
Specie	Sweet Chestnut
Botanical name	Castanea sativa
Wood type	Hardwood
Main occurrence	Asia   Europe   North America
Wood origin	Germany   France   Italy   Czech Republic
Manufacturing/origin	Italy   Austria
Certification	not certified
Colour	light-brown
Hue	medium colour
Use	furniture   interior
Surface structure	band saw cut
Customs tariff number	44089000
Packaging	1 sehet, loose
Items on stock	yes
Date of delivery	approx. 3 - 6 working days
Postal shipping	nein
