Description

The continuous rolls are generally available in 100 or 150 running metres. We only sell the veneer edgings as entire rolls and cannot unroll smaller quantities. If you want to know the exact quantity m1 per roll, please ask us.

Continuous thick veneer edgings from the roll are produced in multiple layers in thicknesses from 1.0 to 3.0 mm. We stock many types of wood in standard thicknesses of 1.0 mm 2-ply, 1.5 mm 3-ply and 2.0 mm 4-ply as well as standard widths of 24 and 30 mm. The real wood veneer edges are sanded on the surface and thickness-calibrated on the reverse side. The structure of several veneer layers ensures high strength, good milling properties, hardly any distortion and constant dimensional stability. The layers of thick veneer edges are glued with PVAC white glues.

Finishing options

- -fine surface sanding
- -thickness calibration on the reverse side

- -bonding-friendly backsides
- -priming or PVAc pre-coating
- -SK pre-coating 180/200/250 g/m2

Advantages

- -highest strength in practically all areas of the edge
- $\hbox{-best\,milling\,properties}$
- -hardly any warping or twisting
- -constant dimensional stability
