

3-layer wood panel reclaimed Larch type 1L | polished

Item No. 06-001656

Description

The cover lamellas in old wood larch type 1L are cut and sanded from old beams, floor boards or planks. They have a slight worm pattern with cracks. By hand, all slats are patched with real wood, which ensures a natural and harmonious appearance.

Available lengths

falling from 2000 to 5000 mm

Structure

Thickness 19 mm = 6.5/6.5/6.5 mm, other thicknesses available on request

Middle layer

The middle layer of the 3-layer panels old wood consists of "new spruce". On customer request, we process the middle layers with special properties (e.g. fire protection or lightweight construction).

Back side/counter-draught

For type 1L, we generally use a new softwood of the factory's choice on the reverse side. The back is sanded as standard and not patched.

Range of application

The panels offer a wide range of applications such as wall panelling, furniture, doors, wooden flooring, etc.

Optics: patching

Cracks or knotholes are patched by hand using only real wood. The result is a visually harmonious and natural old wood surface. We do not use silicone or similar chemical fillers for patching, as these only spoil the look and feel of a surface. Chemically repaired areas attract dust and are difficult to clean.

Optics: grading

Only trained and motivated personnel with sufficient experience create old wood surfaces with a unique character. A harmonious appearance and consistent quality for each panel is particularly important. Precise guidelines and a great deal of intuition for a balanced grading prevent panel images with a "zebra look", which disturb the overall picture and make it appear unsettled.

Optics: glue joints

The glue joints are always pressed together and form a visually uniform panel appearance. In the case of inferior industrial production, open glue joints not only impair the appearance, but also the load-bearing capacity and lifespan of a three-layer board.

Optics: Pests

Only an infestation of the knock beetle beautifies the old wood and gives the surface a unique look. We do not use any raw wood for our three-layer boards that has been destroyed by the house longhorn beetle or by white, brown and blue.

Specifications

Category	Panels
Product group	3-layer solid wood panels
Weight kg/piece	600.000
Specie	Reclaimed Larch
Wood origin	Central Europe
Manufacturing/origin	Austria
Certification	not certified
Postal shipping	nein
